Subject: Letter of Application – Data Analyst

To whom it may concern

It was a typical day of applying but I came across your job posting for an entry level data analyst on indeed, and to be honest I was intrigued by the fact this was open to fresh graduates like myself who's looking to eagerly learn a ton and do data analytics related roles especially in the application of healthcare which is near to my personal experiences. I set to check your website at <https://www.maxicare.com.ph/>, and honestly it all the more piqued my interest that 83% of your employees say it's a good place to work with because you embody values like caring for your customers & employees, that you allow your people to be their own leaders while still holding each other accountable and lastly that you foster a community of teamwork and collaboration. Values which strongly resonate with my own if I'm being honest.

I'm a Computer Science major with a focus on data analytics and data science. My undergraduate Thesis involved leading the development of a bio-signal interference detection system, which is related to healthcare itself the kind I hope I can make an impact in with others at your company. This put to use my analytical and technical skills, and my internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I have been particularly keen in focusing more on data analytics/engineering and deepen my understanding through practical application and continuous learning. And I think with this eagerness in learning and learning from others, it will be much more of an advantage to fostering harmony and productivity there at Maxicare. And honestly, I am really eager to contribute my earned and well-founded knowledge and passion for further challenging exploration of data within your IT services team and collaborate within a supportive team environment.

I believe I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to personally explain further about how my skills and interests might fit into the tech team there. I wish you a great day

Thank you and best regards,

P.S.

I know I haven't submitted yet supporting documents indicating I'm a graduate (even if I have finished all subjects in my course), because they are still being processed as you're reading this so, please see the document I attached indicating that it is still being processed and evaluated. In lieu of this I'd really have the opportunity to still discuss hopefully how I might be a great fit there at Maxicare. Thank you.

Larry Miguel R. Cueva
