Subject: Letter of Application – Data Analytics

To whom it may concern

I came across your company from a mutual colleague's suggestion and honestly, I was intrigued by the fact that this was a company geared towards data analytics in the domain of consultancy. It also piqued my interest that a large part of community consisted of gen z and millennials, which I'm part of myself. And I'm just someone who's looking to learn and absorb a lot of information from more senior professionals but I'll also be glad to have an opportunity to learn from my people roughly the same age as me.

Truth be told I'm just a fresh graduate looking for my first job, and when I sought to check your website <https://zliftsolutions.com/> and went to the contact section and saw that your company was looking for people fond and with a passion for data analysis I had to write this letter in due time.

For context I did focus on data science, AI, and ML in my undergrad where our thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. And while I have experience in building predictive models and I am now particularly keen to focus on data analytics and have done so by building some personal projects with the goal of deepening my understanding through practical application. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at Z-Lift.

If it makes sense to talk, I'd greatly appreciate the opportunity to discuss with you further how my skills and interests might fit into the tech team there at Z-Lift. Have a great day ahead.

Thank you and Best Regards,

Larry
