Subject: Letter of Application – Data Analyst – Consumer

To whom it may concern

I've long since admired RCBC in its maturity as a well-known banking corporation, and I was curious enough to check out your company website where I was particularly drawn to your values of nurturing not only your client's needs but as well as your employees for long term sustainability and development, other values like integrity, teamwork, and excellence. Values which resonate strongly with my own. It has also piqued my interest based on what I've heard from people working there the fact that RCBC has matured in terms of its data, that it has chosen to leverage it as well for data-driven decisions in its business, a process which hopefully I can be a part of by producing insights from such data. Lastly the positive feedback I've heard about your work culture and compensation did indeed solidify my interest.

I'm a recent Computer Science graduate with a focus on data analytics and data science. My undergraduate Thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I am now particularly keen to focus on data analytics and deepen my understanding through practical application and continuous learning. And I think with my eagerness in learning and learning from others will be much of an advantage to fostering harmony and productivity. I am eager to contribute my earned and well-founded knowledge and passion for further challenging data exploration within RCBC's IT services and collaborate within a supportive team environment.

I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to personally explain further about how my skills and interests might fit into the tech team there. I wish you a great day

Thank you and best regards,

Larry Miguel R. Cueva
