Subject: Letter of Application – Data Scientist

Dear Ms. Diaz

It was great to have you come across my profile on LinkedIn and reached out in a personal manner. Because of this I was curious enough to look up Inquirol and the nature of how it conducts business with its clients. I was particularly drawn to the company's use of data driven technologies to provide insights for business owners. The positive feedback I've researched about your work culture and compensation further solidified my interest.

I'm a recent Computer Science graduate with a focus on data analytics and data science. My undergraduate Thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I am now particularly keen to focus on data analytics and deepen my understanding through practical application and continuous learning. Though I must admit that the passion for data analytics has only recently taken hold of me, I think with this eagerness in learning and learning from others, it will be much of an advantage to fostering harmony and productivity. I am eager to contribute my earned and well-founded knowledge and passion for further challenging data exploration within Macquarie's tech graduate program and collaborate within a supportive team environment.

I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to personally explain further about how my skills and interests might fit into the tech team there. All the best.

Thank you and best regards,

Larry Miguel R. Cueva
