Subject: Letter of Application – Data Analytics

To whom it may concern

I came across your company from a certain connection in LinkedIn who I listened to in a talk about their experience working from credit risk analytics to head of data science, and honestly, I was intrigued when I did come across your company as a result. Managing portfolios consisting of mutual funds, trust assets, insurance portfolios, and the lot have all been interesting for me given that I'm trying to learn what I can about the different markets like stocks, forex, bonds, funds etc. and I was really curious how data analytics could fit into all these.

Truthfully I'm just a fresh graduate looking for my first job and someone who's looking to learn and absorb a lot of information from the professionals I hope to come across and I thought Atram given what I've heard from people working there was one of the places where I could grow character and skill wise and when I sought to check your website <https://atram.com.ph/> and saw that it was a company geared toward managing finances of Filipino individuals I couldn't agree more that this was a solution many of our Filipino communities could rely on and improve their financial literacy. And I thought that data analytics was a way to help improve these processes.

For context I did focus on data science, AI, and ML in my undergrad where our thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. And while I have experience in building predictive models and I have particularly been keen to focus on data analytics in my final year of college and have done so by building some of my own personal projects with the goal of deepening my understanding through practical application. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at Atram Group.

That said like any other person trying to look for his first ever job, I know I still have a lot of room to grow, I know I still have a lot to learn, and I am willingly all for it because if there's one thing that separates me from others it's my unique trait of always having fun learning new things – the process so to speak, all I honestly need is a chance...a shot (for lack of a better word) like any other person starting out in his career.

So, if it makes sense to talk, I'd greatly appreciate the opportunity to discuss with you further how my skills and interests might fit into the tech team there at Atram Group. Have a great day ahead.

Thank you and Best Regards,

Larry
