**To : The Human Resources Department
San Miguel Corporation, Pasig**

Subject: Letter of Application – Data Analyst & OR Analyst

To whom it may concern

Having seen San Miguel and more particularly its building since I was a young kid going to SM Megamall every Sunday and then coming across your careers one might be in in the future on your company website, I was particularly impressed by the fact that your prestigious company is one of the largest conglomerates in the Philippines coupled for the fact that the company also is one this nation's largest employers. The belief of the company of being able to grow is what resonates strongly with my own through using technology by writing code and learning constantly as an investment for the future. The positive feedback I've heard about your work culture and compensation further solidified my interest.

I'm a recent Computer Science graduate with a focus on data analytics and data science. My undergraduate Thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I am now particularly keen to focus on data analytics and deepen my understanding through practical application and continuous learning. Though I must admit that the passion for data analytics has only recently take a hold of me, I think with this eagerness in learning and learning from others, it will be much of an advantage to fostering harmony and productivity. I am eager to contribute my earned and well-founded knowledge and passion for further challenging data exploration within San Miguel's tech team and collaborate within a supportive environment.

I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to personally explain further about how my skills and interests might fit into the tech team there. I wish you a great day

Thank you and best regards,

Larry Miguel R. Cueva
