**To : The Human Resources Department  
Shopee**

**Subject: Letter of Application – Data Analyst (Credit Operations Analyst)**

**To whom it may concern**

I've long since admired Shopee as a user especially in its ease of use unlike other product platforms, and I was always confident that whatever product I bought it would be delivered to my doorstep in a convenient manner. I was curious however enough to check out your company website when I was searching for jobs on LinkedIn as a fresh graduate where I was particularly drawn to your values of being simple, valuing happiness, and teamwork. Values which resonate strongly with my own.

It has also piqued my interest based on what I've heard from people working there the fact that Shopee has matured in terms of its data, that it has chosen to leverage it as well for data-driven decisions in its business, a process which hopefully I can be a part of by producing insights from such data. And honestly the positive feedback I've heard about your work culture and compensation further solidified my interest.

During my last years in college, I had a focus on data analytics and data science. My undergraduate Thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I am now particularly keen to focus on data analytics and deepen my understanding through practical application and continuous learning. And I think with my eagerness in learning and learning from others will be much of an advantage to fostering harmony and productivity. I am eager to contribute my earned and well-founded knowledge and passion for further challenging data exploration within Shopee's IT services and collaborate within a supportive team environment as your values entail.

I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to personally explain further about how my skills and interests might fit into the tech team there. I wish you a great day

Thank you and best regards,

**Larry Miguel R. Cueva**
