Subject: Letter of Application – IT Related Role (Data Analytics)

To whom it may concern

I write this because I've long admired ING in capability as a well-known banking company, and I was curious enough to check out your company website <https://careers.ing.com/en> as well as ask some people who work there what it's really like, but other than that the positive feedback I've heard about your work culture and compensation is what solidified my interest. Creativity, collaboration, and innovation: these are some of the things the people I've come across say is what is fostered there and honestly, it's something that I want to be a part of given it just resonates with who I am individually.

Truth be told I'm just a fresh graduate looking for my first job in IT but particularly Data Analytics because it's something I've always been passionate about, and when I sought to hear about people's opinions about working there and the countless openings I saw in your website related to IT there, I just had to write this letter in due time.

For context I did focus on data science, AI, and ML in my undergrad where our thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. And while I have experience in building predictive models and I am now particularly keen to focus on data analytics and have done so by building some personal projects with the goal of deepening my understanding through practical application. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at ING. That said all I honestly need is a chance...a shot like any other person starting out in his career.

So, if it makes sense to talk, I'd greatly appreciate the opportunity to discuss with you further how my skills and interests might fit into the tech team there at ING. Have a great day ahead.

Thank you and Best Regards,

Larry
