

To whom it may concern

Having followed Azeus Systems since your 2022 career fair talk, I was particularly drawn to your company values of responsibility, integrity, teamwork, and collaboration, which resonate strongly with my own. The positive feedback I've heard about your work culture and compensation further solidified my interest.

I'm a recent Computer Science graduate with a focus on data analytics and data science. My undergraduate dissertation involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I am now particularly keen to focus on data analytics and deepen my understanding through practical application and continuous learning. Though I must admit that the passion for data analytics has only recently taken hold of me, I think with this eagerness in learning and learning from others; it will be much of an advantage than it is a hindrance. I am eager to contribute my existing knowledge and passion for data exploration within Azeus's IT services context and collaborate within a supportive team environment.

I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to chat further about how my skills and interests might fit into the tech team there at Azeus.

Best regards,

Larry
