Subject: Letter of Application – IT Analyst II Business Systems

To whom it may concern

Having followed Emerson since your tackle 2022 career fair talk, I was particularly drawn to the company's vast business applications in automotives, electronics, power generation and the like. Your prestigious company's values of continuous improvement, integrity, innovation, and collaboration, which resonate strongly with my own as well as the positive feedback I've heard about your work culture and compensation further solidified my interest.

I'm a recent Computer Science graduate with a focus on data analytics and data science. My undergraduate Thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I am now particularly keen to focus on data analytics and deepen my understanding through practical application and continuous learning. And I think with my eagerness in learning and learning from others will be much of an advantage to fostering harmony and productivity. I am eager to contribute my earned and well-founded knowledge and passion for further challenging data exploration within Emerson's IT services and collaborate within a supportive team environment.

I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to personally explain further about how my skills and interests might fit into the tech team there. I wish you a great day

Thank you and best regards,

Larry Miguel R. Cueva
