Subject: **Letter of Application – Software Engineer (Data Analytics)**

To whom it may concern

It was a typical day of applying but I came across your job posting for a software engineer focused in data analytics on your website https://recruitment.macquarie.com/en_US/careers and to be honest I was intrigued by the fact this was open to those eager to enter in the field of data analytics like myself who's really looking to eagerly learn a ton and do data analytics related roles especially in the application in the application of banking and finance which as I understand is one of the many things your company is about. I set to do more research and honestly it all the more piqued my interest that employees who've worked in your company say it's a good place to work and grow career wise.

Truth be told I'm a fresh graduate looking for my first job, and when I sought to check your website and went to the careers page saw that your company was looking for people fond and with a passion for data analysis, I had to write this letter in due time.

For context I did focus on data science, AI, and ML in my undergrad where our thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. And while I have experience in building predictive models and I am now particularly keen to focus on data analytics and have done so by building some personal projects with the goal of deepening my understanding through practical application. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at Macquarie.

If it makes sense to talk, I'd greatly appreciate the opportunity to discuss with you further how my skills and interests might fit into the tech team there at Macquarie. Have a great day ahead.

Thank you and Best Regards,

Larry
