To whom it may concern

I've had been following Azeus Systems Ltd. for some time now ever since coming across your talk at an online career fair in late 2022. And while individuals I know of working there have had plenty of good things to say about your work culture, amiable work colleagues, and quite frankly compensation and benefits, what really stood out for me was your values of responsibility, integrity, teamwork, and collaboration, in that it aligns as well in my values of open and honest communication whether it be difficult at times, and values of mutual support and collaboration because I personally think you can be the best at everything but if there is a team of mutually supportive people who are at each other's side who aren't the best at everything they can still outlast the former who is so called the "best at everything".

For some context about myself, I recently finished my Bachelors in Computer Science, and I mainly chose to focus my efforts in data analytics and data science. Our recent undergraduate dissertation highlights this as I served as the lead developer in our group along with my fellow AI/ML researchers to build a system that detects interference in bio-signals recorded from the skin of individuals, which we believe served a contribution in paving the way for more research in the field. Apart from that the internships I've had allowed me to learn and have an idea more about big data processes especially at the company scale, which I think will be beneficial should I be given the chance to work at your company.

Recently however I've been keen in learning more about data analytics and exploring the data more seriously as opposed to continuously building predictive models. A skill which I have been working on continually and which I believe can be improved further through training. Though I must admit that the passion for data analytics has only recently take a hold of me, I think with this eagerness in learning and learning from others; it will be much of an advantage than it is a hindrance.

I'm excited not only to apply the knowledge I already have and to learn more about data analytics and data science in the context of a providing IT services to customers, but to be able to collaborate more in a team that fosters growth and support.

If it makes sense to talk, I would love to chat further about how my skills and interests might fit into the tech team there at Azeus.

Best,

Larry
