Macquarie

Subject: Letter of Application – Tech Select Graduate Program

To whom it may concern

Having followed Macquarie since coming across it on LinkedIn, I was particularly drawn to your prestigious company's values of innovation and investing for the future, which resonate strongly with my own of building applications through writing code and learning constantly as an investment for the future. The positive feedback I've heard about your work culture and compensation further solidified my interest.

I'm a recent Computer Science graduate with a focus on data analytics and data science. My undergraduate Thesis involved leading the development of a bio-signal interference detection system, which put to use my analytical and technical skills. My internships have also provided valuable exposure to big data processes at scale which I think will be beneficial should I be given the chance to work at your company.

While I have experience in building predictive models, I am now particularly keen to focus on data analytics and deepen my understanding through practical application and continuous learning. Though I must admit that the passion for data analytics has only recently take a hold of me, I think with this eagerness in learning and learning from others, it will be much of an advantage to fostering harmony and productivity. I am eager to contribute my earned and well-founded knowledge and passion for further challenging data exploration within Macquarie's tech graduate program and collaborate within a supportive team environment.

I am confident that my skills and enthusiasm align well with your team's needs and I would welcome the opportunity to discuss this further.

If it makes sense to talk, I would love to personally explain further about how my skills and interests might fit into the tech team there. I wish you a great day

Thank you and best regards,

Larry Miguel R. Cueva
